

Dr. Nick AbuJamra

 PROSTHODONTIC DENTISTRY

CARING FOR YOUR PERMANENT IMPLANT OVERDENTURE

To best care for this prosthesis:

- Use the home care kit that was provided to you.
- Scrub the denture with a denture brush and soak them at night in water with the tablets provided in the kit.
- Brush the bar to help avoid plaque build up.
- The teeth themselves cannot be flossed but it is very important to floss the bar to avoid plaque build up.
- Clips will need to be changed periodically as wear occurs.

Please contact our office if you have any questions or concerns.
